

Evelyn Coronel

Semi Senior Machine Learning Engineer at Jampp

me@evecoronel.com / <https://www.linkedin.com/in/evelyn-coronel/> - Paraguay

Machine Learning Engineer with an MSc in Physics and a strong foundation in MLOps. I build the tooling that keeps ML systems reliable in production: reporting, monitoring, data quality checks, and drift detection. I use Python, Airflow, Docker, and Kubernetes to make ML pipelines scalable and reproducible. For example, I built a data quality monitor and a dataset-gap tool that excludes contaminated training data before it degrades model performance.

I find organizing stuff satisfying, whether I'm organizing a closet, a trip, a list of issues, an ML project, or a whole codebase, my goal is always efficiency, clarity, and reliability: a good design and plan makes projects cheaper and more robust in production.

WORK EXPERIENCE

Semi Senior Machine Learning Engineer

Jampp - Remote, 07/2022 - Present

I work on deploying and maintaining models in production as well as monitoring them.

- Led the end-to-end deployment and maintenance of production models handling millions of requests per second.
- Improved SQL query performance for large-scale analytics for hundreds of millions rows.
- Reduced production downtime by implementing health checks for models.
- Developed and optimized complex ETL workflows using Apache Airflow.
- Managed the full deployment lifecycle using Docker and Kubernetes
- Experimenting with new models in AWS Sagemaker Jupyter Studio.

Doctoral Student

DESY - Hamburg, Germany, 09/2021 - 03/2022

Part of the ATLAS Experiment at CERN.

- Conducted applied research on Graph Convolutional Neural Networks (GCNNs) and Variational Autoencoders (VAEs) using PyTorch Geometric for complex physical system modeling.
- Modeled high-dimensional continuous energy readings and detector responses from the ATLAS experiment, analyzing anomalies and complex spatial-temporal patterns.

Machine Learning Consultant

Cortical - Remote, 04/2020 - 06/2020

San Francisco based early stage start-up.

- Refactored complex, over-engineered Reinforcement Learning research code into lightweight, maintainable TensorFlow production pipelines.
- Shifted technical strategy from theoretical modeling to a minimum viable product approach.

EDUCATION

Master's degree in Physics

Instituto Balseiro - Bariloche, Argentina, 01/2019 - 12/2021

During Bachelor's and Master's degrees, I modeled atmospheric influence on sensor measurements to identify spatial anisotropies on the measurements of ultra-high energy cosmic rays of the Pierre Auger Observatory data. I searched for large-scale anisotropies in the 1 EeV - 2 EeV energy range finding anomalies suggesting a dipole within this range. Advisor: Prof. Dr. Silvia Mollerach

Bachelor's degree in Physics

Instituto Balseiro - Bariloche, Argentina, 01/2017 - 12/2019

Electrical Engineering

Universidad Nacional de Asunción - Asunción, Paraguay, 01/2015 - 12/2017
